Sprint 1 — AI Usage Log

Name: Hirushi Rathnayaka
Project: CareerConnect
AI Tool: ChatGPT

Task 1: GitHub Documentation Review
Purpose: Improve user stories and task descriptions.

AI Suggestions: Suggested descriptions, acceptance criteria, and sub-issues for existing GitHub Issues.
Validation: Compared suggestions with project requirements and existing issues.
Decision: Modified before use.
Reflection: Helped make user stories clearer and tasks easier to understand.

Task 2: Identifying Duplicate Tasks
Purpose: Reduce overlapping responsibilities.

AI Suggestions: Identified overlaps in database and resume tasks (#38, #42, #46, #54) and suggested clearer responsibilities.
Validation: Reviewed existing issues before making changes.
Decision: Modified before use.
Reflection: Helped avoid unnecessary duplication and improve task organization.

Task 3: Sprint 1 Requirements Review
Purpose: Verify documentation against the assignment.

AI Suggestions: Identified required deliverables and highlighted missing assignments, labels, and documentation.
Validation: Compared the suggestions with the Sprint 1 instructions.
Decision: Accepted with modifications.
Reflection: Helped identify missing requirements and organize the remaining work.

Task 4: Team Task Organization
Purpose: Improve task ownership and coordination.

AI Suggestions: Recommended organizing sub-issues and identifying potential owners based on meeting minutes.
Validation: Compared suggestions with team responsibilities.
Decision: Modified before use.
Reflection: Improved the clarity of team responsibilities.

Overall Reflection

ChatGPT helped me organize and improve Sprint 1 documentation. I reviewed its suggestions before applying changes to the GitHub repository.

Appendix A — AI Interaction Evidence
Interaction 1 — Reviewing Overlapping GitHub Tasks
Interaction 2 — GitHub Documentation Review
Interaction 3 — Sprint 1 Requirements Review
Interaction 4 — Team Task Organization

-Task ID/Title:- Task 2 — Reviewing GitHub Issues and Sub-Issues

-Purpose of AI Use:-
I used ChatGPT to help identify tasks that might be repeated or overlap with work already assigned to other team members.

-Prompt:-
"Can you review our GitHub Issues and sub-issues to check if any tasks are repeated or cover the same work? I'd also like to know which ones should be kept, combined, or updated to make our project more organized."

-AI-Suggested Content:-
ChatGPT pointed out overlaps between some database integration tasks (#42, #46, #54) and resume management tasks (#36, #37, #38). It suggested making each task's responsibilities more specific instead of removing issues that might still be needed.

-Validation:-
I went through the related GitHub Issues and compared their descriptions to check whether the tasks were actually repeating the same work.

-Decision:-
Modified before use. I updated the descriptions of Issues #38, #42, #46, and #54 to make their responsibilities clearer.

-Reflection:-
ChatGPT helped me notice overlaps I had initially missed. By reviewing the suggestions and making the changes myself, I was able to organize the tasks more clearly and avoid removing work that was still necessary.

-Related GitHub Issues:- #38, #42, #46, #54

-Task ID/Title:- Task 1 — Reviewing User Stories and GitHub Documentation

-Purpose of AI Use:-
I used ChatGPT to help improve the descriptions and acceptance criteria of our GitHub user stories and make sure the tasks were clearly organized.

-Prompt:-
"Can you help me review and improve our CareerConnect user stories? I want to make sure each issue has a clear description, relevant acceptance criteria, and the necessary sub-issues without creating duplicate tasks."

-AI-Suggested Content:-
ChatGPT suggested more detailed descriptions, acceptance criteria, and task breakdowns for our existing user stories. It also helped identify which features needed separate sub-issues and which could reuse tasks that were already created.

-Validation:-
I compared the suggestions with our project requirements and existing GitHub Issues. I also checked the related sub-issues before adding new ones to avoid unnecessary duplication.

-Decision:-
Modified before use. I used the suggestions to update the GitHub documentation and adjusted the task breakdowns based on what was already in our repository.

-Reflection:-
ChatGPT helped me organize the user stories and make their requirements easier to understand. It also made reviewing the documentation more efficient, while allowing me to check that the suggested changes made sense for our project.

-Related GitHub Issues:- #1–#10, #12–#16, #30–#34

-Task ID/Title:- Task 3 — Reviewing Sprint 1 Requirements

-Purpose of AI Use:-
I used ChatGPT to help check whether our GitHub documentation met the requirements outlined in the Sprint 1 assignment.

-Prompt:-
"Can you review our CareerConnect GitHub repository and compare our documentation with the Sprint 1 assignment requirements? I want to know what we've completed and if there's anything missing or that needs improvement."

-AI-Suggested Content:-

ChatGPT reviewed the main Sprint 1 requirements, including user stories, sprint planning, team contributions, meeting minutes, and AI usage logs. It highlighted areas that still needed attention, such as task assignments and documentation completeness.

-Validation:-
I compared the suggestions with the Sprint 1 assignment PDF and reviewed our GitHub repository to check which requirements had already been completed.

-Decision:-
Accepted with modifications. I used the suggestions to identify areas that needed improvement and focused on updating the relevant documentation.

-Reflection:-
ChatGPT helped me better understand the Sprint 1 requirements and identify details I might have overlooked. It made the review process more organized and helped me focus on what still needed to be done.

-Related Materials:- Sprint 1 assignment instructions and CareerConnect GitHub repository.

-Task ID/Title:- Task 4 — Organizing Tasks and Team Responsibilities

-Purpose of AI Use:-
I used ChatGPT to help organize our GitHub tasks and identify which team members were responsible for different parts of the project.

-Prompt:-
"Can you help me organize our GitHub Issues and sub-issues based on the responsibilities discussed in our team meetings? I want to make sure the tasks are clearly divided and that everyone knows what they need to work on."

-AI-Suggested Content:-
ChatGPT suggested potential task assignments based on our meeting minutes and helped organize sub-issues for frontend, backend, database, and testing work. It also recommended allowing team members to confirm their own assignments.

-Validation:-
I compared the suggested responsibilities with our meeting minutes and checked the existing GitHub Issues to make sure the tasks matched our team's plans.

-Decision:-
Modified before use. I organized the tasks and asked team members to assign themselves to their respective issues instead of assigning everyone manually.

-Reflection:-
ChatGPT helped me organize the tasks more clearly and understand how to divide responsibilities within the team. It also made it easier to coordinate with teammates and ensure that everyone could identify their assigned work.
